

EASA Part 66 - Module 3 - Electrical Fundamentals - 3 Days

INTRODUCTION

Module 3 covers all things electrical and looks at Electron theory, Static Electricity, Terminology, Generation DC sources & Circuits, Resistance, Capacitance, Magnetism, Inductance, AC theory, AC Generators & Motors

On completion of the module you will be able to sit a multi choice exam and on passing will receive a completion certificate.

All Part 66 training courses are provided under the direct control, oversight and guidance of EAI.

European Aviation Institute (EAI) is an EASA Part 147 approved Maintenance Training Organization (MTO) with Certificate of Approval No RO.147.0003. Providing Part 147 and other specialized "non EASA Part 147" training courses. Providing both integrated and modular packaged quality training solutions from our centre in Bucharest or at other preferred location.

European Aviation Institute was established with the goal of raising the standards of aeronautical training, with access to skilled instructors, the focus is on delivering best in class skills to existing and new generations of aviation technicians and engineers.

Detailed Content / Topics - The following Subjects will be addressed

1. Electron Theory

- Structure and distribution of electrical charges within: atoms, molecules, ions, compounds;
- Molecular structure of conductors, semiconductors and insulators

2. Static Electricity and Conduction

- Static electricity and distribution of electrostatic charges;
- Electrostatic laws of attraction and repulsion;
- Units of charge, Coulomb's Law;
- Conduction of electricity in solids, liquids, gases and a vacuum

3. Electrical Terminology

- The following terms, their units and factors affecting them: potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.

Detailed Content / Topics - The following Subjects will be addressed

4. Generation of Electricity

- Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.

5. DC Sources of Electricity

- Construction and basic chemical action of: primary cells, secondary cells, lead acid cells, nickel cadmium cells, other alkaline cells;
- Cells connected in series and parallel;
- Internal resistance and its effect on a battery;
- Construction, materials and operation of thermocouples; Operation of photo-cells

6. DC Circuits

- Ohms Law, Kirchoff's Voltage and Current Laws;
- Calculations using the above laws to find resistance, voltage and current;
- Significance of the internal resistance of a supply.

7. Resistance/Resistor

- Resistance and affecting factors;
- Specific resistance;
- Resistor colour code, values and tolerances, preferred values, wattage ratings;
- Resistors in series and parallel;
- Calculation of total resistance using series, parallel and series parallel combinations;
- Operation and use of potentiometers and rheostats;
- Operation of Wheatstone Bridge;
- Positive and negative temperature coefficient conductance;
- Fixed resistors, stability, tolerance and limitations, methods of construction;
- Variable resistors, thermistors, voltage dependent resistors;
- Construction of potentiometers and rheostats;
- Construction of Wheatstone Bridge

8. Power

- Power, work and energy (kinetic and potential);
- Dissipation of power by a resistor;
- Power formula;
- Calculations involving power, work and energy.

Detailed Content / Topics - The following Subjects will be addressed

9. Capacitance/Capacitor

- Operation and function of a capacitor;
- Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating;
- Capacitor types, construction and function;
- Capacitor colour coding;
- Calculations of capacitance and voltage in series and parallel circuits;
- Exponential charge and discharge of a capacitor, time constants;
- Testing of capacitors.

10. Magnetism

- Theory of magnetism;
- Properties of a magnet;
- Action of a magnet suspended in the Earth's magnetic field;
- Magnetisation and demagnetisation;
- Magnetic shielding;
- Various types of magnetic material;
- Electromagnets construction and principles of operation;
- Hand clasp rules to determine: magnetic field around current carrying conductor;
- Magnetomotive force, field strength, magnetic flux density, permeability, hysteresis loop, retentivity, coercive force reluctance, saturation point, eddy currents;
- Precautions for care and storage of magnets

11. Inductance/Inductor

- Faraday's Law;
- Action of inducing a voltage in a conductor moving in a magnetic field;
- Induction principles; Effects of the following on the magnitude of an induced voltage: magnetic field strength, rate of change of flux, number of conductor turns; Mutual induction;
- The effect the rate of change of primary current and mutual inductance has on induced voltage;
- Factors affecting mutual inductance: number of turns in coil, physical size of coil, permeability of coil, position of coils with respect to each other;
- Lenz's Law and polarity determining rules;
- Back emf, self induction;
- Saturation point;
- Principle uses of inductors.

12. DC Motor/Generator Theory

- Basic motor and generator theory;
- Construction and purpose of components in DC generator;
- Operation of, and factors affecting output and direction of current flow in DC generators;

Detailed Content / Topics - The following Subjects will be addressed

12. DC Motor/Generator Theory

- Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors;
- Series wound, shunt wound and compound motors;
- Starter Generator construction.

13. AC Theory

- Sinusoidal waveform: phase, period, frequency, cycle;
- Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power;
- Triangular/Square waves;
- Single/3 phase principles.

14. Resistive (R), Capacitive (C) and Inductive (L) Circuits

- Phase relationship of voltage and current in L, C and R circuits, parallel, series and series parallel;
- Power dissipation in L, C and R circuits;
- Impedance, phase angle, power factor and current calculations;
- True power, apparent power and reactive power calculations

15. Transformers

- Transformer construction principles and operation;
- Transformer losses and methods for overcoming them;
- Transformer action under load and no-load conditions;
- Power transfer, efficiency, polarity markings;
- Calculation of line and phase voltages and currents;
- Calculation of power in a three phase system;
- Primary and Secondary current, voltage, turns ratio, power, efficiency;
- Auto transformers.

16. Filters

- Operation, application and uses of the following filters: low pass, high pass, band pass, band stop.

17. AC Generators

- Rotation of loop in a magnetic field and waveform produced;
- Operation and construction of revolving armature and revolving field type AC generators;
- Single phase, two phase and three phase alternators;
- Three phase star and delta connections advantages and uses;
- Permanent Magnet Generators.

Detailed Content / Topics - The following Subjects will be addressed

18. AC Motors

- Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase;
- Methods of speed control and direction of rotation;
- Methods of producing a rotating field: capacitor, inductor, shaded or split pole.

Target groups

Mechanics & Technicians wishing to develop a detailed understanding of subject material in preparation for the sitting of EASA Part 147 Module examination.

Pre-requisites

This is a review course so it is important that you spend time studying the material in preparation for your examination – see also [www.easaonline.com Part 66](http://www.easaonline.com/Part%2066) where you can enroll to review the material and practice the examination.

Learning Objectives

To support the achievement of gaining a credit in the EASA Part 66 Basic Licence Module Exam.

Duration

3 days - Each training day will commence at 09.00 and finish at 17.00, with appropriate refreshment breaks.

Each day consists of 6 hours training.
