

EASA Part M Implementing, Developing and Managing an Effective Reliability Program - 3 Days

INTRODUCTION

When dealing with the complex technical systems involved in air transport and the extensive competition, the consequences of unreliable services become critical and may include –

- A high cost of operation;
- A loss of productivity;
- Incidents, and exposure to accidents.

To this end, aircraft operability is considered as one of the major requirements by air operators. Aircraft operability is the aircraft's ability to meet the operational requirements in terms of operational reliability (i.e. the percentage of scheduled flights that depart and arrive without incurring a chargeable technical/operational interruption).

Reliability programs form an essential element of the continuing airworthiness process and in fact are mandatory when aircraft are managed using MSG methodology.

The purpose of a reliability program is to ensure that the aircraft maintenance program tasks are effective and their periodicity is adequate, in addition the reliability program may result in the escalation or deletion of a maintenance task, as well as the de-escalation or addition of a maintenance task.

Whilst the primary purpose is to demonstrate the effectiveness of the Aircraft Maintenance Program, we can use the reliability program to support both the optimisation and development of the maintenance program.

Reliability data is also collected and analysed by the manufacturer as a tool to optimise the maintenance process and such information is typically considered by the MRB working groups.

This intensive 3 Day practical course is specifically aimed at organisational personnel who are required to actively control and deliver the aircraft reliability program.

The training focuses on the gathering and processing of data. The display of Reliability Data and the way in which this data may be used to benefit the maintenance program.

Date

22nd – 24th January
2018

Venue

Mjets Facilities Don
Mueang Bangkok,
Thailand

Category

Personal Development

Price

855 USD

Detailed Content / Topics - The following Subjects will be addressed

Day 1

- Abbreviations & Terms
- Aircraft Maintenance Program Introduction
- General Introduction to Aircraft Reliability Systems
- Part M Subpart C Regulatory Driven Reliability requirements
- Maintenance Planning Engineering Function
- The Benefits of an Effective Reliability Program
- Performance Standards
- Measures of Reliability
- Operator Responsibilities
- Structure and Development of the Reliability Program
- Aircraft Maintenance Programme Reliability Considerations

Day 2

- Information Sources & Data Acquisition
- Reliability Analysis and Interpretation
- Standard Deviation & Alert Levels
- Calculating Reliability Data
- Indicators of Structural Reliability
- Indicators of Aircraft Components Reliability
- Presenting Reliability Data
- Engine Reliability Program (Engine Condition Trend Monitoring (ECTM))
- Effective use of reliability data to support the management of Continuing Airworthiness
- Understanding Strip reports and working with workshop data

Day 3

- Reliability Programme Administration
- Manage Competencies within a Reliability Framework
- Developing Reliability Procedures
- Reliability Auditing
- Corrective Actions
- Reliability Driven Optimization
- Managing External Information Sources
- Pooling Arrangements
- Evaluation, Review and Changes
- Managing check findings in the context of reliability
- Measuring the Effectiveness of the Maintenance Planning Process

Date

22nd – 24th January
2018

SOFEMA

Aviation services

Aviation Regulatory Experts

TRAINING COURSE DETAILS

Target groups

CAMO staff involved in managing the Maintenance or Reliability programs, Reliability Staff and other staff with technical involvement in the Aircraft reliability processes.

Pre-requisites

A background in an aviation airworthiness environment. Detailed awareness of Part M CAMO obligations and processes.

Learning Objectives

A reliability program provides an appropriate means of monitoring the effectiveness of the maintenance program. This training covers all elements required to ensure you achieve the maximum benefit from your Reliability Program.

Duration

3 Days - Each training day will start at 09.00 and finish at 17.00 with appropriate refreshment breaks.

Date

22nd – 24th January
2018
