

## Safety Management Systems for Cargo Operations Staff – 1 Day

### Introduction

An effective SMS is an essential tool to raise the understanding that the cargo operators face in respect of the various risks affecting the aviation cargo business.

An ICAO-compliant Safety Management System provides a mechanism to proactively seek, identify, quantify, and mitigate risks and potential hazards which exist in the business.

Moreover, it provides a mechanism to deliver a safer working process and environment in every facet of your day-to-day business.

There is an overlap between Compliance (Quality) monitoring and Safety and we will understand the importance of bringing together Compliance (Quality), Safety, and Human Factors in the cargo operations environment.

We deliver SMS training for all elements of your business from a need-to-know overview for Cargo Managers and Supervisors to specific training for cargo loaders and handlers.

We all talk about the need for safety but often fail to take full account of the benefits of an effective proactive SMS as the means not just to deliver this safety but to introduce a systematic approach to identify hazards within your organization.

Sofema Aviation Services is a solid and reliable provider of services to the European Aviation Community.

We are able to support you to understand and implement an effective SMS system in your workplace. We understand the issues which challenge your business and with our experience, we can help you to mitigate, and determine appropriate solutions.

The primary goal of this Training is to focus on understanding of the role of Cargo Operations Staff within your Company SMS.

The Training is designed to raise awareness of all organizational elements of the SMS system and to consider the various management challenges.

This Training assumes only an essential understanding of the SMS requirements in Cargo Operations.

### Who is the course for?

This course is for individuals who work in the field of cargo operations, specifically focusing on safety management systems (SMS). The course aims to provide participants with a comprehensive understanding of SMS principles, practices, and regulations relevant to cargo operations.
