

## Aviation Flight, Ground, Quality, Safety & Maintenance Instructors – 5 Days

### Introduction

Within our Aviation Environment, we have a regulatory and organizational obligation to share processes and procedures in the most effective way. To do this the organization benefits immensely from having its own internal capacity to deliver a range of training courses across many disciplines.

This course aims to provide a comprehensive understanding of the best practice Instructional techniques for effective training in the aviation environment and to prepare the Instructor with a key competence understanding serving as a precursor to delivering training on behalf of the organisation.

The course focuses both on the implementation and management processes involved in Aviation Training as well as the need to develop personal training skills.

To introduce the delegate to training skills and to provide the confidence which can be developed to deliver effective Training within your organizations.

Extensive use is made of group exercises, case studies and feedback.

The delegate will receive pre-course work in support of this training to add value to the practical elements of this training. In addition, the delegate will make several short presentations throughout the training and will develop a typical training program for a maintenance-related subject.
