

## Freedom Pass Testimonials and Case Studies

### J. Delmonte, May 2023:

"The Freedom Pass program is a very cost-effective way to educate yourself with timely and relevant knowledge for a fraction of the cost that attending private institutions or colleges charge.

During 2022 I completed 6 Diplomas under the Freedom Pass program. The Freedom Pass enabled me to reinforce my understanding of airworthiness by pursuing specific diploma paths to provide practical knowledge of the EASA aviation regulations and how similar (or different) there are in comparison to the FAA. So, the Freedom Pass program proved its capability to supplement and complement my career portfolio effectively.

The knowledge acquired from these courses will enable me to pursue future career opportunities in commercial aviation and contribute to my growing list of skills and competencies."

### C.C., March 2022:

"The program is great, I am using it for improving my overall knowledge in aviation maintenance and management area. Even though I have long experience in CAMO, Design, and Maintenance, I still consider that reviewing in an organized way the regulations and getting new information provided by Sofema courses is a great benefit.

As I have no pressure of time (a great benefit of the program) I am attending courses when I like and I have time to learn. The program is a good opportunity in terms of money, it is possible to study for one year for the amount paid. I would recommend the program to companies or individuals."

### F.A., March 2022:

"I would like to thank Sofema for offering these courses and the whole program. The Materials are wonderful. Absolutely I will recommend, I am even telling people to visit your website and try a course/package. I know they will appreciate the offers you have."

### G.S., September 2021:

"I found your program really good and knowledgeable enough even for a specialist in the field and also for managers. Sofema team is really great and every time replied really fast. I started this Freedom Pass Program with the idea in the future to work in Safety and Compliance and for that, I consider it necessary to have a complete understanding of Aviation domains, this is possible with your program.

I found this program really valuable for what I learned already and I consider it deserves every single euro cent paid. I already recommended it to a few friends and they looked interested."
