

Development and Management of EASA 145 Maintenance Organisation Exposition (MOE) – 1 Day

Introduction

The purpose of the maintenance organisation exposition (MOE) is to identify the procedures, means and methods of the approved EASA 145 organisation. An up-to-date and effective MOE is crucial to maintaining a valid organizational approval.

Compliance with the contents of the MOE assures compliance with the requirements of Part-145, which is a prerequisite to obtaining and retaining a maintenance organization approval certificate. It is understood that the (competent authority*) will approve this organization whilst the (competent authority*) is satisfied that the procedures are being followed and work standards maintained.

It is further understood that the (competent authority*) reserves the right to suspend, limit or revoke the approval of the organization if the (competent authority*) has evidence that procedures are not followed or standards are not upheld.

The MOE typically covers four main parts:

The management MOE covers the parts specified earlier.

The maintenance procedures cover all aspects of how aircraft components may be accepted from outside sources and how aircraft will be maintained to the required standard.

The quality system procedures include the methods of qualifying mechanics, inspection, certifying staff and quality audit personnel.

Contracting operator procedures and paperwork.

Who is the course for?

The "Development and Management of EASA 145 Maintenance Organisation Exposition (MOE) – 1 Day" course by Sofema Aviation Services is for quality managers, compliance managers, maintenance managers, auditors, and regulatory inspectors. It provides knowledge and skills for developing and managing the EASA 145 MOE to ensure regulatory compliance.
