EASA/GCAA Airport SMS Overview & Recurrent – 2 Days

Introduction

This intensive 2 Day course is specifically designed to focus on the needs of the Airport SMS Department to ensure an Effective, Efficient, and Reliable Safety Management System.

Periodically we should consider our Safety Management Systems in a more Holistic way to consider whether it is delivering the optimum benefit for our organization.

This 2-day course aims to provide a comprehensive review of the overall effectiveness of our SMS. Delegates will undertake an overall review of SMS best practices and together with the regulatory-driven obligations will perform a GAP analysis against their own organization system

The course is highly participative and assumes prior knowledge of SMS requirements and objectives.

The airport is a busy and dynamic environment with many stakeholders required to integrate into a unified SMS process. An effective SMS is about identifying exposure to risk as felt by the entire business. With the introduction of EASA Commission Regulation (EU) No 139/2014, EASA is creating a performance-based regulatory environment for Aerodrome Operators and Operations.

The primary focus of the training is to support the delegate's need to deliver effective management of safety including the process to measure risk and exposure and the development of mitigation strategies.

Who is the course for?

It is for persons who are actively involved in the management or Interaction of the organization's SMS including Quality Audit Staff, Nominated Persons, and business process owners, as well as anyone with an interest to achieve an effective understanding of the SMS Hazard Identification & Risk Mitigation processes.
