

Aviation Safety Management System - Risk Assessment - Train The Trainer – 2 Days

Introduction

It is not just about meeting the framework objectives, it is about developing an integrated management system that, as well as ensuring the minimization of hazards and the associated risks, engages with the organization's process and procedures in a way that supports efficiency and optimization to drive organizational improvement.

The role of SMS trainers in an ICAO or EASA (European Union Aviation Safety Agency) compliant Safety Management System (SMS) is critical because they are responsible for conveying the importance, methodology, and practical application of safety management principles to personnel across the aviation organization.

This course reviews the fundamentals, considers the various training elements, and supports the understanding related to the interaction between Hazards, treating the associated risk, and developing the appropriate mitigations.

They ensure that staff are properly equipped to contribute to a safer aviation environment.

Developing an organizational capability to deliver effective Safety Management Risk Assessment Training will benefit the organization and support the effective treatment of the "Safety System" identified exposures.

This 2-day course aims to prepare your SMS Trainer to fully engage in the training of Risk Monitoring and Safety Performance processes.

Who is the course for?

It is for persons who are actively involved in the delivery of Safety System Risk Management Training, it will also be of interest to other Quality and Safety Professionals as well as other stakeholders and business area owners.
